

# 21,5" / 23,6" Full HD Smart TV

Anleitung zur Firmware-Aktualisierung

Firmware update guide

---

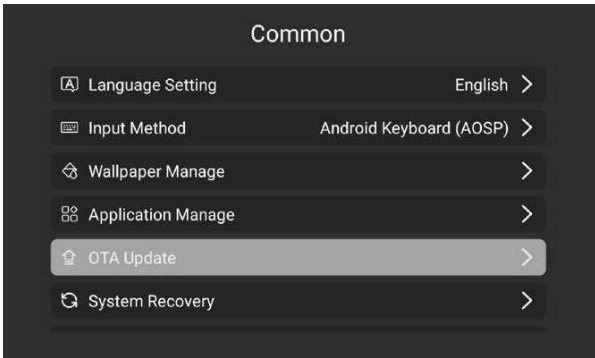

INTRODUCTION

OTA (Over-the-Air Technology) over-the-air download technology. It is a technology for remote management of the system through the network. TV firmware upgrade is also system upgrade. It can effectively and reliably upgrade the TV in the user's hands by downloading over the air. In this way, TV manufacturers can introduce TVs with new functions to the market more quickly and thereby increase users' satisfaction with their TVs.

OTA FIRMWARE UPGRADE MANUAL CHECK

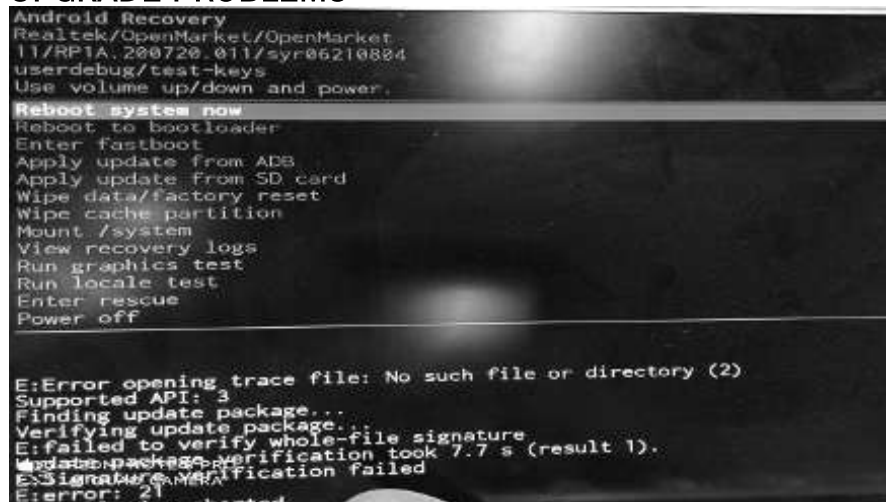

This process explains how to manually check for firmware updates. Before to start please check that the internet connection to the TV is up and running.

| Step | Screenshot                                                                          | Instruction                                |
|------|-------------------------------------------------------------------------------------|--------------------------------------------|
| 1    |   | At the Homepage, select the “Setting” menu |
| 2    |  | At the Settings Menu select “Common”       |

| Step | Screenshot                                                                          | Instruction                                                                   |
|------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 3    |    | At the Common Menu select “OTA Update”                                        |
| 4    |    | Check the internet connection, check the time then select “Check for updates” |
| 5    |  | New Version detected! Select “Download” to start the installation.            |

| Step | Screenshot                                                                                                                                                                                                                                                                                                                                                                                           | Instruction                                                          |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 9    |  A screenshot of an Android system update screen. It features a dark background with a grey rectangular box in the center. Inside the box, the text "Android system update" is at the top, followed by "Processing the update package." and a progress bar. The progress bar is partially filled and labeled "27%". | The system will restart in recovery mode and unpack the firmware     |
| 10   |  A screenshot of the Android installation screen. It shows a dark background with a large white circular progress indicator in the center. Below the circle, the text "Installing system update" is visible, followed by a small horizontal progress bar.                                                           | After the upgrade is finished, the system will restart automatically |

## UPGRADE PROBLEMS

In case of an upgrade failure, exceptions, or other errors, a debugging tool can be launched. If the debugging tool does not appear, please select the “View Recovery Logs” option, then select “Last\_log.” Take a picture of the log screen and send it to the Reimo Service Department.

If your device is equipped with a serial debugging tool, connect the serial port, select “Reboot system now,” and plug in the USB flash drive. After fully booting up, enter the command: su, then send all the files in /cache/recovery to the Reimo Service Department.
